

Gucci babies?

By The Science Research Team:

Introduction: Against Designer Babies

- We at the Ethical Science Initiative believe we should not alter Human DNA
- Altering human DNA is proved to cause problems in our society
- Altering human DNA should be reconsidered and it is not a good idea
- Designer babies are 100% bad

What Are Designer Babies?

Designer Baby: A designer baby is a baby whose genetic makeup has been selected in order to eradicate a particular defect, or to ensure a particular gene is present.

- it can modify beauty, increase intelligence, and decrease the possibilities of babies inheriting diseases
- you can alter DNA by simply cutting the DNA to make mutations or by using technology
- Designer Babies are proven to be harmful in our society

Designer Babies: Bad For Society

- research has shown that altering DNA can increase the population, which is bad because it will eventually overpopulate society
- this can create more global warming and even starvation
- Designer Babies cost a lot of money, which will then create a bigger gap between the rich and the poor

Designer Babies: Bad For Society Continued

- Designer Babies can create super diseases
- Chance of taking out good DNA, instead of bad.
- Think about it...Would you really want the chance of you or your kids getting a horrible life threatening disease just because you tried to make your kid better than they already are?

Designer Babies Are Good? What??

- changing DNA can create a disease resistant baby.
- it can improve mutations in humans and make humans healthier
- it can make babies more intelligent and prettier
- intelligence can help humans succeed in life
- being more attractive can be good in society but not for health

Did you know that pros of designer babies are more like cons?

- If your baby wasn't naturally smart it can lead to getting judged
- Others can think genetically smart people are dumb because they had to get their intelligence enhanced
- If they make people more appealing, people would think they are fake because it is not their real self
- Even though it is said to get rid of diseases, in reality it can create super diseases, that are more harmful
